Emerging markets are affected both by the pace and sequencing of policy reforms. This requires special analytical tools to determine the behaviour of financial variables in an environment which is subjected to policy shocks. The **Journal of Emerging Market Finance** is a forum for debate and discussion on the theory and practice of finance in emerging markets. While the emphasis is on articles that are of practical significance, the journal also covers theoretical and conceptual aspects relating to emerging financial markets. Peer-reviewed, the journal is equally useful to practitioners and to banking and investment companies as to scholars. This journal is a member of the Committee on Publication Ethics (COPE).

Electronic Access:

Journal of Emerging Market Finance is available electronically on SAGE Journals Online at <http://emf.sagepub.com>
